

Collaboration and Honesty Policy

We understand that, once the rules are clear to you, most of you would never consider cheating in any form. This document specifies the rules of collaboration in the course and penalties for cheating. We require that each student read, sign, and return this document.

No collaboration is permitted on exams and optional problems.

You *may* **verbally** collaborate on required homework problems, however, you must write your solutions independently. If you choose to collaborate on a homework assignment, you are allowed to discuss it with **at most 3** other students currently enrolled in the class. Before working with others on a problem, you should think about it yourself for at least 30 minutes. On **each** homework you submit, you must include the names of the students with whom you have had discussions concerning your solutions. **Indicate whether you gave help, received help, or worked together. If you worked alone, write “Collaborators: none”.**

- You *may* get help from anyone on issues which are clearly more general than the specific assignment (e.g., what does a particular L^AT_EX error message mean?)

You may use references such as books and online resources for well known facts, however, you must **always** cite the source.

- You *may not* look up answers to a homework assignment in the published literature or on the web, or consult an AI model (such as ChatGPT, Google Gemini, or Claude) when solving HW problems.
- You *may not* share written work with anyone else.
- You *may not* receive help from students who have taken the course in previous years.
- You *may not* review any course materials from previous years.

Thus, clear examples of cheating include, but are not limited to:

- Googling the content of a homework question.
- Entering a homework question (copied or paraphrased) into an LLM like ChatGPT, Google Gemini, or Claude.
- Showing your Python code or a draft of a written solution to another student.
- Copying down a solution that another student has written on a whiteboard. (Sharing written work.)
- Getting help from someone whom you do not acknowledge on your solution.
- Copying from another student during an exam.
- Receiving exam-related information from a student who has already taken the exam.
- Looking at someone else’s work on BU computer systems or, e.g., Overleaf, *even if the file permissions allow it*.
- Submitting a problem solution that you cannot orally explain to the course staff.

Violations of the collaboration policy—for example, not stating the names of your collaborators, or any other attempt to represent the work of another as your own—will result in an automatic failing grade and will be reported to the Academic Conduct Committee (ACC). The ACC often suspends or expels students deemed guilty of plagiarism or other forms of cheating. Make sure you understand the BU Academic Conduct Code:

<http://www.bu.edu/academics/policies/academic-conduct-code/> .

If you are uncertain as to whether a particular kind of interaction with someone else constitutes illegal collaboration or academic dishonesty, please ask an instructor before taking any action that might violate the rules; if you can’t reach an instructor in time, then at the very least include a clear explanation of what happened in your homework solutions to avoid being treated as a cheater. Citing your sources is usually the easiest way out of trouble.

I, David Bunger, have read and understood the above CS 237 policy on collaboration and cheating. I agree to honor the rules which the policy describes.
